

NURTURE NEW JERSEY

2021 STRATEGIC PLAN

Making New Jersey the safest and most equitable place in the nation to give birth and raise a baby.

IV. Executive Summary

The United States has the worst maternal mortality rate among all comparable economically developed member countries of the Organization for Economic Cooperation and Development (OECD). Thirty-six countries comprise the OECD, and the US ranks the highest in maternal mortality. Within this global context, New Jersey's maternal health outcomes and disparities are among the worst in the US. The state has the fourth highest maternal mortality rate out of the fifty states; only Indiana, Georgia and Louisiana have higher rates. When looking at the demographic breakdown of the rates in New Jersey, Black women in New Jersey experience seven times the rate of death from pregnancy-associated causes compared to their white counterparts.

For infant mortality, the US again ranks poorly internationally—33rd out of 36 OECD countries.

While New Jersey as a whole has the 5th best overall infant mortality rate among the 50 states, its challenge with respect to infant mortality is the unacceptable disparity: Black women in New Jersey experience a 3.5 times higher rate of infant death compared to white women (2017 data, courtesy of New Jersey State Health Assessment Data (NJ SHAD)) and Hispanic women in New Jersey experience twice the rate of infant mortality compared to white women (NJ SHAD 2016-2018, 3-year rates). While nationally, Native American women experience high rates of infant mortality, the population numbers in New Jersey are too small to tabulate a rate. Over a five-year period from 2014-2018, there were 335 live births to Native American women in the state and one infant death.¹

NJ PREGNANCY-ASSOCIATED DEATHS BY RACE/ETHNICITY

First Lady of New Jersey Tammy Murphy officially launched Nurture NJ in early 2019 as a statewide initiative committed to reducing maternal and infant mortality and morbidity, as well to ensuring equity in maternal and infant morbidity and mortality for Black and Brown women in the state. Nurture NJ is a multi-pronged, multi-agency initiative that aims to make New Jersey the safest place for women to give birth and raise a child, and to eliminate the state's racial disparities.

In the Fall of 2019, the First Lady convened a team of national experts to create a Strategic Plan for Nurture NJ that would document the existing need, survey current efforts, and define a course for lasting, transformative change. She did so with the understanding that such an ambitious initiative would require significant policy changes in the social, political, and economic arenas. Improved maternal and infant health outcomes in the state will only be possible when the racial inequities in health are eliminated. Health equity, in turn, can only occur when racial equity is achieved in all three arenas. Looming over this, however, was the knowledge that the State as a whole must be prepared to confront its racial inequities.

As the strategic planning unfolded, national events

exploded, fixing the nation's attention on racism and racial and ethnic inequities. Before the end of the first quarter of 2020, the country was beset by a global pandemic of COVID-19 that has killed far too many people in New Jersey and worldwide [over 17,827 death in New Jersey, 224,000 US deaths, and 1.14 million deaths worldwide as of January 10, 2021]. Black populations experienced a disproportionate amount of illness and death from COVID-19. Black New Jersey residents comprise 13 percent of the total state population but comprise 17 percent of all COVID-19 deaths in the state.

Then, in May 2020, George Floyd was murdered by a policeman in Minnesota. The combination of these two events, COVID-19 and George Floyd's murder, mark a moment in history when many Americans witnessed, and could no longer deny, the depth of structured racial inequities in a country they assumed to be "post-racial". Those on the frontlines of racial justice prior to this moment lost patience with the slow—or non-existent—progress in remediating racial oppression. Communities across the country and across New Jersey gathered in the streets to protest the structural racism affecting Black people with regard to policing. The state of maternal and infant health in New Jersey, with the

extreme disparities in maternal and infant morbidity and mortality, reflects these same forces as they play out in the reproductive lives of women. This Strategic Plan offers channels through which to act.

This is not the first attempt to address these issues. New Jersey has been setting ambitious goals for decades. In the fall of 1996, a Blue-Ribbon Panel on Black Infant Mortality was convened to formally study the problem of infant mortality in New Jersey. The Panel developed a series of Recommendations to address the high rates of Black infant mortality. Meanwhile, Healthy New Jersey 2000 set a goal to decrease Black infant mortality from the 1996 rate of 16.3 per 1000 live births to 11.0 deaths per 1000 live births by 2000. That target wasn't reached until 2011—11 years after the target date. By 2017, seventeen years after the expectation of reaching a rate of 11.0 deaths per 1000 live births, the Black infant

mortality rate in New Jersey was 9.4 per 1000 live births, marginally surpassing the goal set in 2000 (see Table 1).

New Jersey as a whole, ranks more favorably than the US average on a number of social and health indices, but the overall numbers mask the experience of Black and Brown people in the state. In a recent report, New Jersey ranks as the eighth healthiest state overall, up from eleventh in 2018 and twenty-second in 2000, which consistently puts it among the states with the largest improvements.² However, in key indicators (see Table 2), Black and Brown New Jersey residents fare worse than other populations in the state. There are considerable disparities by race/ethnicity in poverty, unemployment and per capita income.

The disparities in maternal and infant outcomes are not the result of differences in genes or behavior, but the

Table 1: Infant Outcomes

result of the different historic, social, economic, and health environments experienced by Black and Brown women.³ These economic and social differences matter for health, they are determinant of health, and as long as they exist, so will the disparities in maternal and infant health.

The last 25 years have seen little impact on improving maternal health, reducing maternal morbidity and mortality, and reducing infant mortality; and no progress toward equity in most outcomes. The US as a whole has actually gotten worse across these indicators, and lags behind most economically comparable countries in maternal and infant health. New Jersey mirrors these national trends. The pathways leading to adverse outcomes in maternal and infant health include multiple dimensions of causality that accumulate over a lifetime and across generations. They have social roots with multiple intersections that form unique and complex conditions of lived experience that the old systems of health care and public health were not designed to accommodate.

Nurture NJ recognizes this complex reality and has been actively building momentum toward implementing new ways to address these challenges with the state's stakeholders. The Nurture NJ Strategic Plan brings to bear the science to define a new structural approach, and can be an organizing force for government, private stakeholder, and community partnership action. This Strategic Plan is predicated on the knowledge that achieving the goals of Nurture NJ will require innovative and transformative action to achieve structural change. The goal is to make New Jersey the safest place in the nation to give birth and raise a baby by improving conditions for maternal and infant health during critical periods, and by achieving equity in all maternal and infant health outcomes.

To make this massive task more digestible, the Strategic Plan identifies three proximal objectives: (1) ensure all women are healthy and have access to care before pregnancy, (2) build a safe, high-quality, equitable system of care and services for all women during prenatal, labor and delivery and postpartum care, and (3) ensure supportive community environments and contexts during every other period of a woman's life so

that the conditions and opportunities for health are always available. Achieving these proximal objectives, and the ultimate goals of Nurture NJ, will require simultaneous transformation through nine domains of action, across three life course areas affecting maternal and infant health.

The disparities in maternal and infant outcomes are not the result of differences in genes or behavior, but the result of the different historic, social, economic, and health environments experienced by Black and Brown women.

9 Action Areas for the Nurture NJ Strategic Plan include:

1. Build racial equity infrastructure and capacity.

Racism finds its way into all systems affecting the health of women and children—including health, social services, criminal justice systems, housing, food systems, employment, etc. For Nurture NJ to be successful in achieving equity in maternal and infant outcomes and in making New Jersey the safest place to give birth, some hard work is needed to dismantle the systems that hold racism in place both inside and outside government. What makes Nurture NJ distinct from other strategic plans is its commitment to eliminating the role that racism plays by systematically restructuring the systems that hold racism in place. Therefore, new structures need to be built to both provide people with the capacity and skills to undo racism, and to ensure that the requisite equity-promoting actions become a part of every person’s and organization’s DNA.

2. Support community infrastructures for power-building and consistent engagement in decision-making.

During the Nurture NJ strategic planning process, the voices of women in New Jersey communicated loud and clear “not about us without us”, meaning: “listen to us; do not make decisions that profoundly affect our lives without us at the decision-making table.” The Strategic Plan outlines specific actions to structure this engagement into practice. Community engagement in decision-making is only the first step. Effective collaboration between residents and agencies requires support to communities to build their own knowledge base, conduct their own critical analyses and enhance their leadership skills. The Strategic Plan includes recommendations to ensure a sustained, effective, and structured process of community power-building and engagement.

3. Engage multiple sectors to achieve collective impact on health.

In order to achieve the vision of Nurture NJ, private sector participation is as critical as public sector participation for the needed values-based transformation for the state. All sectors must be engaged—education, housing, health, business, government, policy, justice, service providers, and each of these sectors needs to work with racial

equity awareness, practices, and processes. The Strategic Plan makes a series of recommendations to ensure that all sectors play a role in achieving improved outcomes, and that they work collaboratively to achieve outcomes no single stakeholder or sector could achieve alone. This Plan also recommends implementation of a place-based model that the highest need communities can embrace to demonstrate the positive impacts of building a supportive community context for health.

4. Shift ideology and mindsets to increase support for transformative action.

Mindset shifts are important first steps because they allow redefinition of the range of possibilities available to apply as solutions in health and public health design, policy, research, and implementation. Several mindsets pervading the practice of maternal and infant health that are in need of transformation and addressed in this Plan include:

FROM	TO:
There are implicit and explicit beliefs in a de facto hierarchy of human value, with Black and Brown people valued less than others.	Racial equity is fundamental to dismantling the structures based on a hierarchy of human value contributing to actions that maintain or create inequities.
It is the behaviors of Black and Brown people that cause adverse outcomes. Changing women’s behaviors through education and/or provision of resource directories will achieve the desired health outcomes.	Historic oppression has an impact on current socioeconomic resources of individuals and communities and creates inequities that reverberate throughout every aspect of life. Individual behaviors exist at the end of a long chain of causality.
Maternal and Infant mortality can be improved through prenatal interventions alone.	Women’s health and wellness across the life course, including before, during and after pregnancy are critical components of good pregnancy outcomes.
Top-down decision making in health is expedient and appropriate to achieving desired outcomes.	Community power building and power sharing on issues that affect communities is critical to designing and implementing effective, accessible, acceptable, stress and trauma free interventions.

5. Strengthen and expand public policy to support conditions for health in New Jersey.

To understand the unique policy dynamics affecting women in New Jersey, the Nurture NJ strategic planning team conducted nearly 30 interviews with policymakers operating at the state level, asking which current policies most influenced maternal health, and which policies could influence maternal health in the future. The policy recommendations reflect expansion of the extraordinary work currently undertaken by public servants, as well as a desire to broaden and strengthen policies to create a supportive environment for health.

6. Generate and more widely disseminate data and information for improved decision-making.

In order to ensure that New Jersey is making the best decisions, the state must have a clear understanding of the data describing conditions on the ground and across sectors. The Nurture NJ Strategic Plan envisions improvement in the collection of data on women's experiences, use of linked state data

and evidence, and improved accessibility to data for accountability purposes. The Plan also envisions improved dissemination of data to stakeholders across the state who need the information to develop better solutions.

7. Change institutional structures to accommodate innovation and transformative action.

Recognizing that most organizational structures were not designed to accommodate innovative approaches and designs (multisector engagement for collective impact, community engagement, racial equity, human-centered approaches), the Strategic Plan makes a series of recommendations that can change structures to better handle transformative approaches and interventions.

8. Address the social determinants of health.

Maternal and infant health and well-being are often determined by factors outside the health system, as well as by factors that exist before a pregnancy begins. Addressing social determinants of health means ensuring that families live in conditions that are always supportive of health, ensuring protection against adverse exposures, and providing remediation against barriers to access to needed care, services and healthy behavioral practices. The set of recommendations in this action area ensures access to resources and conditions to attain and maintain health in environments where people live, work, play, study and seek help.

9. Improve the quality of care and service delivery to individuals.

Improving the delivery of respectful, equitable and evidence-based care is critical to achieving the Nurture NJ goals. This requires transformation in the way care and services are delivered by health and other service providers. All of the preceding action areas and the recommendations contained within them are foundational to being able to deliver equitable, effective and evidence-based care to individuals. The set of recommendations contained in this action area focus on the process of care and service provision and will be effective insofar as they are implemented on top of the foundational structures of racial equity, community engagement and multisector collaboration.

Conclusion

Achieving the goals of Nurture NJ will require innovative and transformative action. The old adage is true: every system is perfectly designed to achieve the results it gets. The systems in New Jersey need to be transformed in order for the outcomes for mothers and infants to change. Therefore, the realization must take firm hold in New Jersey that it is unreasonable to expect any different outcome by continuing to employ the same strategies and approaches from the past. The state cannot afford to waste time tinkering at the margins of the current system to impact inequities in health and eliminate the high rates of morbidity and

mortality. Women in New Jersey and their families cannot afford to wait. Women and families in this state deserve better. In response, all stakeholders who have the power to initiate change cannot shrink from the challenge of transformative change. The very impetus and notion of Nurture NJ as conceived by First Lady Tammy Murphy is aligned with the desires of every resident in this state, every woman of color, and their families—to have a safe, healthy, respectful and joy-filled prenatal, childbirth and child-rearing experience—and this vision needs to be realized for all women, starting now.

V. Recommendations at a Glance

1. BUILD RACIAL EQUITY INFRASTRUCTURE AND CAPACITY.

- 1.1 All state departments and agencies should be required to implement a plan for increasing and maintaining capacity to promote racial equity in all systems and structures.
- 1.2 Declare racism a Public Health Emergency.
- 1.3 Establish a State Equity, Diversity and Inclusion Office responsible for equity, diversity, inclusion and Equal Employment Opportunity (EEO), as a cabinet-level office.
- 1.4 Create a state-led accrediting body, reporting to the State Equity, Diversity and Inclusion Office, empowered to award a “racial equity designation” for the public and private sectors.
- 1.5 The state should convene the private sector to incentivize and engage them in action on racial equity.
- 1.6 Build upon the Nurture NJ Interdepartmental Working Group to break down internal silos and share possibilities for collaboration.
- 1.7 Explore the process and impacts of existing Truth, Racial Healing and Transformation (TRHT) processes in other states to determine potential impact in New Jersey.

2. SUPPORT COMMUNITY INFRASTRUCTURES FOR POWER-BUILDING AND CONSISTENT ENGAGEMENT IN DECISION-MAKING.

- 2.1 State departments and agencies, in partnership with the private sector, non-profits, community leaders, and funders, should develop infrastructure for community-level power- and knowledge- building in communities with high Black maternal and infant mortality.
- 2.2 All state departments and agencies should be required to issue written statements of their commitment to community engagement.
- 2.3 Develop permanent structures to integrate community partnership into state, county and local decision- making processes.
- 2.4 Develop incentives for all public and private entities that increase multisector and cross-state collaboration and community engagement.

3. ENGAGE MULTIPLE SECTORS TO ACHIEVE COLLECTIVE IMPACT ON HEALTH.

- 3.1 Develop public-private partnerships to implement place-based, community partnered change models in areas with the highest Black maternal and infant morbidity and mortality and then expand to every community across New Jersey.
- 3.2 The funders collaborative in support of Nurture NJ should support a Nurture NJ Coordinator to oversee implementation of the Nurture NJ Strategic Plan.
- 3.3 Establish a Center in the state capital that focuses on innovation and research in maternal and infant health through partnerships with the state's academic, funder, business and faith communities.

4. SHIFT IDEOLOGY AND MINDSETS TO INCREASE SUPPORT FOR TRANSFORMATIVE ACTION.

- 4.1 State, county and local leaders should leverage the declaration of racism as a public health emergency to generate media coverage and facilitate community dialogues.
- 4.2 Through a statewide communications campaign, shift ideology around the role of life course experiences, environmental and social exposures on women and infant health.
- 4.3 Develop a communications plan to promote benefits of midwifery and community doula models of care.
- 4.4 Develop a communications plan to encourage mindset shifts regarding the connection of behavioral and physical health services.
- 4.5 Actively shift public and private sector mindsets on benefits of shared decision-making with community.
- 4.6 Ensure understanding of the importance of human-centered and trauma-informed care practices and expand use among all program planners and providers.
- 4.7 Private sector businesses and/or their associations should fund, conduct and disseminate a business case for racial equity analysis specific to New Jersey.
- 4.8 Reframe the statewide targets in Healthy NJ 2030 to eliminate disparities in Black versus white rates.

5. STRENGTHEN AND EXPAND PUBLIC POLICY TO SUPPORT CONDITIONS FOR HEALTH IN NEW JERSEY.**Recommendations to Achieve Healthy Women:**

- 5.1 The State should continue to invest in opportunities for safe, decent, toxin-free affordable housing.
- 5.2 The Secretary of Higher Education should expand successful programs that improve access to high quality education.
- 5.3 The Department of Treasury should increase uptake of the Earned Income Tax Credit.
- 5.4 The Department of Labor should continue their efforts with employees and employers to expand utilization of the paid family leave benefits.
- 5.5 The Department of Health should increase the utilization of the Women, Infants and Children (WIC) Program through policy changes and program modernization.
- 5.6 The Department of Human Services should continue to expand flexibility in the Supplemental Nutrition Assistance Program (SNAP) to ensure the maximum number of eligible families are enrolled and utilizing the benefit.

Recommendations to Achieve Equitable Service and Care:

- 5.7 New Jersey should affirmatively provide for comprehensive family planning services and reproductive autonomy through policy and in funding.
- 5.8 The Department of Human Services should strengthen efforts to make the health system accountable to women of color through reliable coverage and evidence-based care.
- 5.9 The Division of Consumer Affairs should examine standards of care related to maternal and infant health.
- 5.10 The Department of Health should implement a system of community-designed, real-time maternal feedback on quality of care.
- 5.11 The Department of Health, the Office of the Secretary of Higher Education and the Department of Labor should promote workforce development and retention in communities of color.
- 5.12 The Office of the Attorney General, through the Division of Community Affairs, should develop pre and post licensure education for New Jersey's health professions.
- 5.13 The Department of Human Services and Department of Health should support a representative, effective community workforce serving pregnant individuals and babies.
- 5.14 The Department of Human Services should continue to ensure comprehensive access to health care for women through the Medicaid program by seeking funding and federal approval to expand Medicaid to 365 days postpartum.
- 5.15 Assess models for value-based care to ensure they do not penalize health providers that disproportionately serve communities with high social needs.
- 5.16 Through the Nurture NJ Interdepartmental Working Group, state departments and agencies should conduct a community-led analysis of co-location of community-based government assets.
- 5.17 Craft and disseminate an "advised procedure" for how county prosecutors work with pregnant women, including the possibility of delaying sentencing for the period of pregnancy and three months postpartum.

Recommendations to Achieve Supportive Environments and Institutions:

- 5.18 The Department of Health should work with state leaders to provide breastfeeding support in communities for both mothers, fathers and other partners.
- 5.19 The Department of Children and Families should continue to expand and universally offer evidence-based home visiting programs with focus on those models proven to reduce maternal and infant mortality.
- 5.20 The Department of Education should continue to prioritize access to high quality childcare through Early Head Start.
- 5.21 State leaders should increase the state contribution to the childcare block grant to ensure that, at a minimum, all families within the income limits are able to receive care.
- 5.22 The New Jersey Economic Development Authority should provide targeted support to childcare providers as a critical industry in the state.

6. GENERATE AND DISSEMINATE INFORMATION FOR IMPROVED DECISION-MAKING.**Recommendations to Achieve Healthy Women:**

- 6.1 Publish a biannual journal or magazine for maternal and infant health in New Jersey through the proposed Center for Maternal and Infant Health (recommendation 3.3) and an academic partner.

Recommendations to Achieve Equitable Service and Care:

- 6.2 Improve the process for quality and usage of state maternal mortality data through significant reinvestment in the Maternal Mortality Review Committee (MMRC).
- 6.3 The Department of Human Services and Department of Health should work together to improve accountability to women of color through data transparency.

Recommendations to Achieve Supportive Environments and Institutions:

- 6.4 The Department of Health, in collaboration with academic partners, should develop a data-based approach to racial inequity surveillance able to identify health and social disparities and focus approaches.
- 6.5 The academic community in New Jersey should commit to conducting research to monitor and evaluate changes in community engagement, perceptions (mindsets, narrative change), changes in community-supportive policy, and resultant health impacts in populations of color in New Jersey.

7. CHANGE INSTITUTIONAL STRUCTURES TO ACCOMMODATE INNOVATION.**Recommendations to Achieve Healthy Women:**

- 7.1 Staff of key state departments and agencies should become familiar with Nurture NJ Ecosystem in order to use it to guide and prioritize all program development, implementation, monitoring and evaluation.
- 7.2 The Department of Human Services and Department of Health should ensure access to affordable, equitable integrated behavioral health care at all times over the life-course.
- 7.3 Provide access to the full range of family planning services, including all safe and effective contraception methods and abortion care, through stronger provider relationships.

Recommendations to Achieve Equitable Service and Care:

- 7.4 Strengthen and expand practice of the midwifery model of care in New Jersey by building a more robust workforce pipeline.
- 7.5 All 49 birthing hospitals and the birthing facilities in New Jersey should meet or attain rates lower than the national target for NTSV surgical/cesarean births.
- 7.6 The Department of Health and the Department of Human Services should expand the use and improve the utility of the Perinatal Risk Assessment.
- 7.7 New Jersey hospitals should institute systemic changes to accommodate doulas and safe birth practices.
- 7.8 To promote access to comprehensive, continuous, high-quality maternal care services, the state should design tools to promote shared decision-making with patients.
- 7.9 The New Jersey Perinatal Quality Collaborative (NJPQC), the organization responsible for improving the quality of perinatal care throughout the state, should lead implementation of prenatal and postpartum Alliance for Innovation in Maternal Health (AIM) bundles across the state.
- 7.10 All persons who give birth in New Jersey should be cared for at a birthing hospital or facility that provides the appropriate level of maternal care by the end of 2022.
- 7.11 The Department of Health and Department of Human Services and other relevant departments or agencies should collaborate on a plan to develop community-based providers, including birthing centers, in underserved areas.
- 7.12 The Department of Health should work with New Jersey health care providers to increase accountability on racial equity initiatives.
- 7.13 State leaders should assess the benefit of regulatory relief to underserved communities and providers.
- 7.14 State leaders should increase funding for prenatal and reproductive health care for undocumented women.

Recommendations to Achieve Supportive Environments and Contexts:

- 7.15 The Department of Health and Department of Human Services should continue to strengthen the community health worker workforce.
- 7.16 State departments and agencies and health care providers should incorporate community-based perinatal health workers in an interdisciplinary care approach to support pregnant women and caregivers into the postnatal period.
- 7.17 Continue to expand and strengthen Fatherhood Engagement Initiatives.
- 7.18 Continue to improve and transform Central Intake.

8. ADDRESS THE SOCIAL DETERMINANTS OF HEALTH.**Recommendations to Achieve Healthy Women:**

- 8.1 Regional health hubs should work collaboratively with state departments and agencies, private funders, community and grassroots groups and academic leaders on a landscape analysis in the state's Black maternal and infant health hotspots.

- 8.2 New Jersey's stakeholders in the nutrition sector should expand partnerships to develop multisector efforts to address the specific issue of access to healthy foods.
- 8.3 Develop multisector efforts to address the specific issue of the impact of environmental factors on maternal and infant health.

Recommendations to Achieve Equitable Service and Care:

- 8.4 Develop multisector efforts to address the specific issue of transportation access for women.

Recommendations to Achieve Supportive Environments and Contexts:

- 8.5 New Jersey's housing developers, funders, advocates and stakeholders should develop multisector efforts to increase the availability of quality, affordable housing for pregnant individuals and women with young children.
- 8.6 Develop multisector efforts to address the specific issue of women impacted by the criminal justice system.

9. IMPROVE THE QUALITY OF CARE AND SERVICE DELIVERY TO INDIVIDUALS.

Recommendations to Achieve Healthy Women:

- 9.1 Ensure quality and respectful preconception, interconception care and women's wellness care is available, accessible and affordable for all women, and that it conforms to CDC Guidelines.

Recommendations to Achieve Equitable Service and Care:

- 9.2 Secure a Commitment to Action from the CEOs of all health care systems and leadership of health professional societies in New Jersey, which should include action steps to reduce maternal and infant mortality and morbidity.
- 9.3 Increase access to Centering Pregnancy.
- 9.4 The Department of Human Services should ensure access to comprehensive evidence-based childbirth education for all Medicaid beneficiaries as standard practice of prenatal care.
- 9.5 Increase the number of Baby-Friendly designated hospitals in New Jersey to at least one hospital in all infant mortality hotspot areas.
- 9.6 Normalize active engagement of fathers and other partners during prenatal care, labor and delivery and postpartum care.
- 9.7 The Department of Banking and Insurance should continue outreach to pregnant women.

Recommendations to Achieve Supportive Environments and Contexts:

- 9.8 Ensure all parents receive community -based peer support for postpartum health, breastfeeding and social support.
- 9.9 Health care providers, social service providers and health insurers should promote alternative models of early childhood care to expand care for the infant.

Figure 4

Nurture NJ Maternal And Child Health Ecosystem Map

Timing	Before pregnancy	Prenatal care, labor & delivery, postpartum	Postpartum, early childhood, throughout life course	
KEY OUTCOME:	HEALTHY WOMEN	EQUITABLE SERVICE & CARE	SUPPORTIVE ENVIRONMENTS & INSTITUTIONS	
Clinical, Social, Community, Policy and Environmental Conditions and Actions Needed to achieve outcomes	RACIAL EQUITY			Equity and Improved Maternal and Infant Outcomes
	COMMUNITY POWER			
	BUILDING MULTISECTOR COLLABORATION			
	Mindset Shift	Mindset Shift	Mindset Shift	
	Whole-life approach to women's health, not only during pregnancy	Accountability for the health and safety for all women, especially those impacted by social and historic factors	Holistic solutions that address population-level problems	
	Public Policy	Public Policy	Public Policy	
	Application of Health Equity in All Policies and Practices standards, intersectional design and implementation frame	Health Equity in All Policies and Practices across funding and policy decisions	Health Equity in All Policies and Practices at the population-level to guide policy, intervention and funding	
	Research	Research	Research	
	Innovative and community-grounded to assess the impacts of the equity-based Ecosystem model on women's health	Quality improvement, monitoring, & evaluation and implementation science driven by community-grounded needs.	Evidence base of strategies to remediate and repair social and historical risks developed through community-grounded research	
	Institutional & Structural Change	Institutional & Structural Change	Institutional & Structural Change	
"Equity-integrated" designation process for agencies, organizations and businesses	Capacity development to create designated equity-integrated organizations	All agencies and public and private organizations designated "equity-integrated" institutions
